Denton, TX | 252-452-9552 | shreyasumanthakuri@gmail.com | [linkedin.com/in/shreyasumanthakuri](https://www.linkedin.com/in/shreyasumanthakuri)

PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience designing and delivering scalable data pipelines, ETL/ELT workflows, and cloud-native data platforms across AWS, GCP, and Azure. Proven impact at the NFL, Royal Caribbean Group, and Keller Williams — driving 40% faster report generation, 25% ETL performance gains, and 30% reduction in pipeline errors. Experienced in data quality automation, pipeline monitoring, and cross-functional stakeholder collaboration. Currently expanding modern data stack expertise in dbt, Apache Airflow, and Snowflake. U.S. Army Veteran with security clearance eligibility.

TECHNICAL SKILLS

Languages: Python, SQL, T-SQL, PL/SQL

Cloud Platforms: AWS (S3, Redshift, Lambda, Glue) · GCP (BigQuery, Dataflow, Cloud Storage) · Azure (Data Lake, Data Factory, Synapse)

Data Engineering: ETL/ELT, Apache Spark, PySpark, Dataflow, Talend, Apache Airflow, dbt (in progress), Data Modeling, Data Integration

Data Warehousing: BigQuery, Redshift, SQL Server, PostgreSQL, Snowflake (in progress)

Data Quality: Automated Validation, Data Profiling, Root Cause Analysis, Pipeline Monitoring & Alerting

BI / Reporting: Power BI, Tableau, Semantic Modeling

DevOps / Tools: Docker, Git, CI/CD (CircleCI), CodeCommit, Bitbucket, Terraform (in progress)

PROFESSIONAL EXPERIENCE

Data Engineer – Quality & Automation | NFL (Contract)

Sep 2023 – Mar 2024

- Built a Python-based automated validation framework that tested data accuracy, completeness, and consistency across 15+ enterprise pipelines, reducing pipeline errors by 30%.
- Designed repeatable data quality checks and monitoring dashboards that surfaced defects 3× faster, improving trust in downstream datasets for analysts and business stakeholders.
- Supported pipeline reliability across AWS environments (S3, Redshift), partnering with engineering teams on root cause resolution and stability improvements.
- Investigated and documented data anomalies, driving resolution with cross-functional teams and reducing recurring production incidents.
- Contributed to sprint planning, code reviews, and SDLC artifacts, including test plans, test cases, and QA reports.

Data Engineer – ETL & Reporting | Royal Caribbean Group (Contract)

Aug 2022 – Aug 2023

- Designed and built ETL workflows integrating data from databases, APIs, and flat files into Azure Data Lake, accelerating report generation by 40% for BI teams across 5 business units.
- Optimized Talend- and T-SQL-based ETL processes, achieving 25% performance improvement through query tuning and transformation logic refactoring.
- Implemented automated data quality checks with alerting and monitoring, reducing recurring production failures and improving data trust for downstream reporting.
- Built semantic and reporting models in Power BI, standardizing executive-facing dashboards across business units.
- Authored stored procedures and SQL transformation logic supporting recurring data integration, validation, and reporting workflows.
- Managed master and reference data governance, improving consistency across enterprise reporting outputs.

Data Engineer – GCP | Keller Williams (Contract)*Apr 2022 – Jul 2022*

- Built and maintained automated GCP data pipelines using BigQuery, Dataflow, and Cloud Storage to process large-scale real estate datasets for analytics and reporting.
- Designed logical and physical data models in BigQuery with partitioning and clustering strategies, improving query performance by 35% on high-volume datasets.
- Integrated multi-source data into a consolidated analytics environment, enabling trusted reporting across business units.
- Supported CI/CD and automated deployment workflows using CircleCI, ensuring reliable pipeline delivery and version control.

Specialist | U.S. Army Reserve

Nov 2025 – May 2026

- Completed active-duty reserve training with a focus on mission-critical execution, operational precision, and structured problem-solving under pressure.
- Applied rigorous documentation standards, process adherence, and accountability protocols — directly transferable to production data infrastructure and incident response.
- Operated in high-stakes, time-sensitive environments requiring clear cross-team communication and attention to detail.

EDUCATION

Master of Science in Computer Information Systems *2020 – 2022*
University of Mary Hardin-Baylor · Belton, TX

Bachelor of Science in Computer Information Systems & Business Management *2015 – 2019*
North Carolina Wesleyan University · Rocky Mount, NC

ADDITIONAL

Veteran Status: U.S. Army Reserve Veteran — Reservist through Nov 2028. Security clearance eligibility.
Upskilling: Actively building hands-on projects in dbt, Apache Airflow, Snowflake, Databricks/PySpark, and Terraform.
